## **DECLARATION BY THE CANDIDATE**

We, **BHEESHMA REDDY, NIKITHA MARAMRAJU, SANTOSH KUMAR** bearing hall ticket numbers, **1602-19-737-128, 1602-19-737-145 and 1602-19-737-164**, hereby declare that the project report entitled **“RAILWAY ENQUIRY SYSTEM”** is submitted in partial fulfilment of the requirement for the award of the degree of Bachelor of Engineering in Information Technology.

This is a record of bonafide work carried out by us and the results embodied in this project report have not been submitted to any other university or institute for the award of any other degree or diploma.

**BHEESHMA REDDY**

**1602-19-737-128**

**NIKITHA MARAMRAJU**

**1602-19-737-145**

**SANTOSH KUMAR SOMA**

**Department of Information Technology**

## **BONAFIDE CERTIFICATE**

This is to certify that the project entitled **“RAILWAY ENQUIRY SYSTEM”** being submitted by **BHEESHMA REDDY, NIKITHA MARAMRAJU, SANTOSH KUMAR SOMA** bearing **1602-16-737-128, 1602-16-737-145, 1602-16-737-164** in partial fulfilment of the requirements for the award of the degree of Bachelor of Engineering in Information Technology is a record of bonafide work carried out by him/her under my guidance.

**R. Dharma Reddy**  
Assistant professor  
Internal guide

**Dr. Ram Mohan Rao**  
HoD  
Dept Of IT

## **ACKNOWLEDGEMENTS**

The satisfaction that accompanies the successful completion of the project would not have been possible without the kind support and help of many individuals. We would like to extend our sincere thanks to all of them.

We would like to take the opportunity to express our humble gratitude to R. Dharma Reddy Sir under whom we executed this project. We are grateful to his guidance, inspiration and constructive suggestions that helped us in the preparation of this project. His constant guidance and willingness to share his vast knowledge made us understand this project and its manifestations in great depths and helped us to complete the assigned tasks. We would like to thank all faculty members and staff of the Department of Information Technology for their generous help in various ways for the completion of this project.

Finally, yet importantly, we would like to express our heartfelt thanks to our HOD Dr. K. Ram Mohan Rao Sir and classmates for their help and wishes for the successful completion of this project.

## **ABSTRACT**

Service quality is the most important factor for the passenger's satisfaction. India has biggest railway network across the country and in the whole world. The purpose of this project is to enhance the service quality of Railway Enquiry System and to attain the passenger's satisfaction.

In this project we provide users with the details of a train and various functions related to it. The Railway Enquiry System facilitates the passengers to enquire about the trains available on the basis of Train name and Train number, enquire about the status of the booked ticket, locating the live station of the train and the railway stations available in a particular geographical region.

The aim of this project is to design and develop a web application for the users incorporated with these features.

This project uses various available Railway APIs provided by RapidAPI.

# 1. LIST OF TABLES/FIGURES

## 1) UI PROTOTYPES AND SCREENSHOTS-

- Home Page
- Search Train by name
- Search Train by number
- PNR status
- Live station
- Find Station
- Find trains between source and destination
- Find train fares
- Railway Station near you
- User Query Section
- Chatbot

## 2) USE CASE DIAGRAM

## **2. INRODUCTION**

Service quality is the most important factor for the passenger's satisfaction. India has biggest railway network across the country and in the whole world. The purpose of this project is to enhance the service quality of Railway Enquiry System and to attain the passenger's satisfaction. In this project we provide users with the details of a train and various functions related to it. The Railway Enquiry System facilitates the passengers to enquire about the trains available on the basis of train number and train name, enquire about the status of the booked ticket, locating the live station of the train and the railway stations available in a particular geographical region. The aim of this project is to design and develop a web application for the users incorporated with these features. This project uses various available Railway related 3<sup>rd</sup> party Rest API'S.

### **2.1. Objective**

To design an online website for tourists travelling through railways, through which the users are provided with the details of a train and various functions related to it. It facilitates the passengers to –

- Home Page
- Search Train by name
- Search Train by number
- PNR status
- Live station
- Find Station
- Find trains between source and destination
- Find train fares
- Railway Station near you
- User Query Section
- Chatbot

## **2.2. General Constraints**

All computer software needs certain hardware components and also other software resources to be present, in order for computers to be used efficiently. These pre-requisites are known as System Requirements. System Requirements are of two types – Software Requirements and Hardware Requirements.

### **2.2.1. Hardware Constraints**

Hardware Requirements refer to the common set of requirements defined by any operating system or software application and are usually the physical computer resources. In this we look into the architecture, processing power, memory, secondary memory, display adapter and peripherals.

In order to use Railway Enquiry System, one should have the following hardware requirements:

- Any device like smart phones with OS or the desktops/laptops having a browser to access the website

### **2.2.2. Software Constraints**

Software Requirements deal with defining the software resource requirements and prerequisites that need to be installed on a computer to provide optimal functioning of an application. These preconditions are generally not included in the software package and need to be installed separately.

In order to use Railway Enquiry System, one should have the following software requirements:

- Server side: Rest API
- Client side: Any network enabled device which is able to connect to the server and can run the browser will be able to open the website.

### 2.3. Characteristics

- **User Friendly:** - The proposed website is user friendly because the retrieval and storing of data is fast and data is maintained efficiently. Moreover, the user interface which is provided in the proposed website, which provides user to deal with the system very easily.
- **Computer operator control:** Computer operator control will be there so no chance of errors. Moreover, storing and retrieving of information is easy.

### **3. RELATED WORK**

#### **3.1. EXISTING SYSTEM**

The official government railway website such as IRCTC has features such as

- Catering & Hospitality
- Internet Ticketing
- Travel & Tourism
- Packaged Drinking Water (Rail Neer)

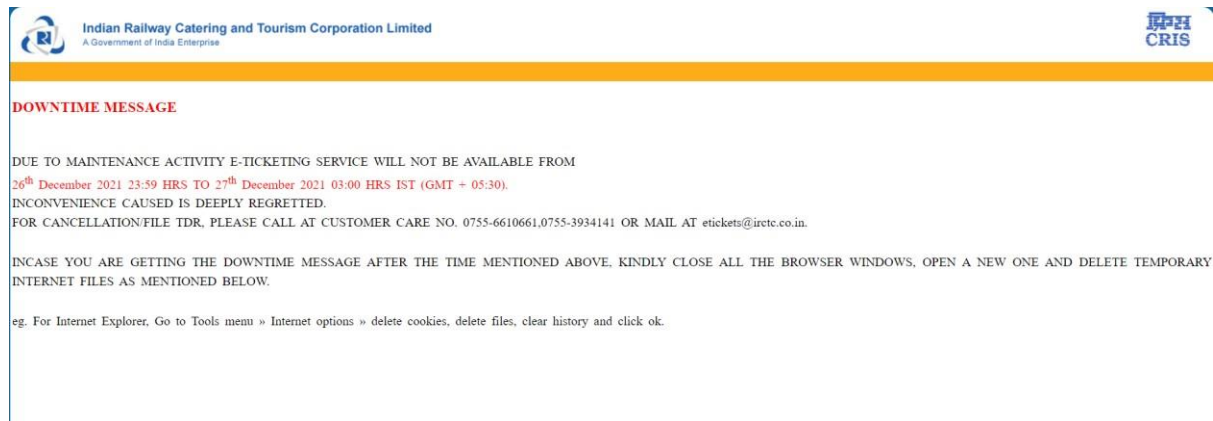

Railway since time immemorial has been the kaleidoscope of tourist in the country. Considering the vast expanse of the country, Railways in India have been moving carrying domestic as well international visitors.

IRCTC, established in 1999, has been mandated by the Government of India to professionalize and upgrade rail-based tourism in the country. Over the last twenty years, IRCTC has been a catalyst in the overall promotion and development of rail tourist across the country.

IRCTC is probably the only organization offering packages ranging from Rs.900 per day to USD 900 per day.

### 3.2. LIMITATIONS OF THE EXISTING SYSTEM

The official IRCTC website often shows server error or downtime messages. Its maintenance has been falling down drastically over the past few decades

### 3.3. PROPOSED MODEL

The model which we are designing has the best service quality. The purpose of this project is to enhance the service quality of Railway Enquiry System and to attain the passenger's satisfaction. In this project we provide users with the details of a train and various functions related to it. The Railway Enquiry System facilitates the passengers to enquire about the trains available on the basis of train number and train name, enquire about the status of the booked ticket, locating the live station of the train and the railway stations available in a particular geographical region. The aim of this project is to design and develop a web application for the users incorporated with these features

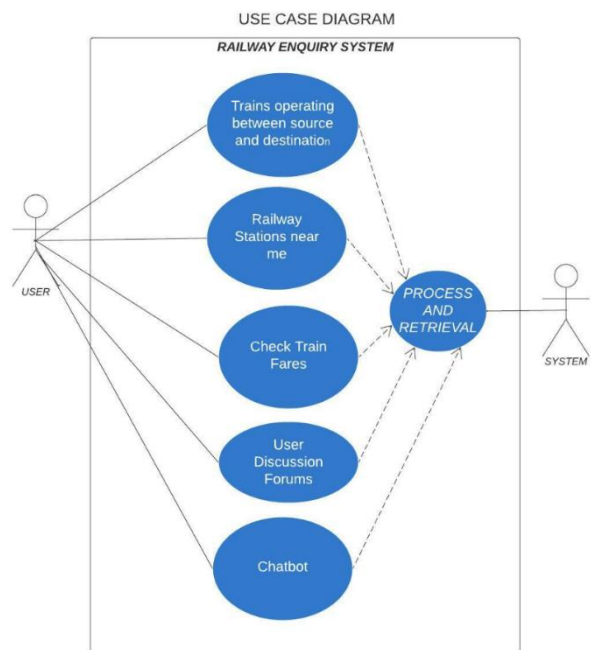

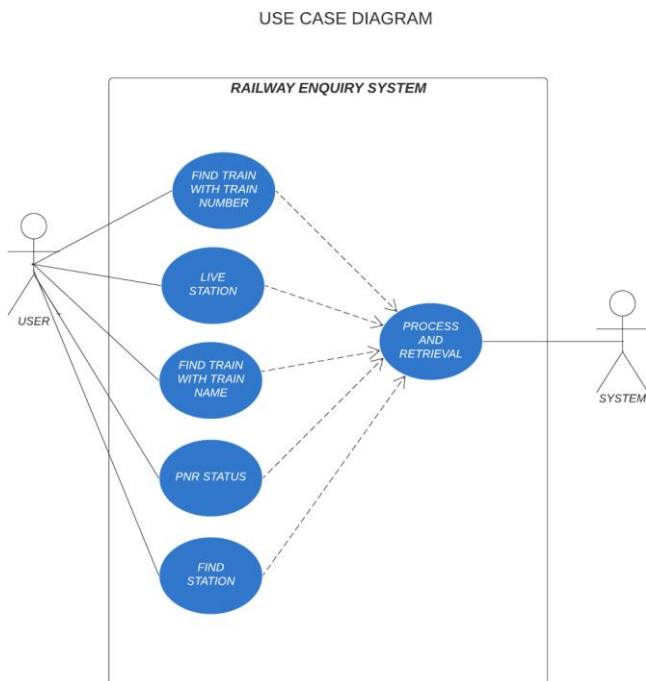

## 4. PROPOSED WORK

### 4.1. ACTORS

An actor is a user or external system with which a system being modelled interacts. User and the system are actors in the proposed system.

### 4.2. USE CASES

A use case is a methodology used in system analysis to identify, clarify and organize system requirements. The use case is made up of a set of possible sequences of interactions between systems and users in a particular environment and related to a particular goal. The method creates a document that describes all the steps taken by a user to complete an activity.

## **4.2.1. USER USE CASES**

### **4.2.1.1. FIND TRAIN WITH TRAIN NUMBER**

Firstly, the user is required to enter the train number in the search box. The user is given the option to get to know the train details such as

- 1) Train name
- 2) From (Place)
- 3) Destination (Place)
- 4) Arrival time and departure time
- 5) Availability of train on particular days of a week.

### **4.2.1.2. FIND TRAIN BY NAME**

Firstly, the user is required to enter the train name in the search box. The user is given the option to get to know the train details such as

- 1) Train name
- 2) From (Place)
- 3) Destination (Place)
- 4) Arrival time and departure time
- 5) Availability of train on particular days of a week

#### **4.2.1.3. LIVE STATION**

Using this feature the user can get the details of the running train. The user is required to enter the train ID and date of journey.

The following status of the train gets displayed –

- 1) Train ID
- 2) Train Number
- 3) From (Place)
- 4) Destination (Place)
- 5) Departure status
- 6) Termination status
- 7) Date and time of departure
- 8) Alert message
- 9) Train is Late by (in minutes)

#### **4.2.1.4. PNR STATUS**

The user is required to enter the PNR number first. The details such as –

- 1) Train number
- 2) Train name
- 3) From (Place)
- 4) Destination (To)
- 5) Boarding date
- 6) Class
- 7) Chart status
- 8) Last Updated

- 9) Termination status
- 10) Date and time of departure
- 11) Alert message
- 12) Train is Late by (in minutes)

#### **4.2.1.5. FIND STATION**

The user is required to enter the required station details. There will be a list of trains displayed running through that station.

#### **4.2.1.6. FIND TRAINS BETWEEN SOURCE AND DESTINATION**

The user is required to enter the names of source and destination stations. There will be a list of trains displayed that are available between the required stations. Train departure, arrival time and the total journey time is displayed.

#### **4.2.1.7. FIND TRAIN FARES**

The user is required to enter the names of source and destination stations along with the train number. The categories like adult, general, tatkal, child, etc. are displayed along with their fares for different classes like 1A, 2A, 3A, SL, 2S, GN.

#### **4.2.1.8. RAILWAY STATIONS NEAR YOU**

The longitude and latitude of our region are automatically retrieved by the system based on the algorithm used. User needs to enter the radius (in km) within which he wishes to get the train details. All the train details within that radius are displayed.

#### **4.2.1.9. CHATBOT**

User can have a chat with the system in case of any queries such as Finding trains between two stations, fares, railway stations, PNR status and live station.

## 4.3. ARCHITECTURE AND TECHNOLOGY USED

### 4.3.1. ARCHITECTURE

#### 4.3.1.1. DJANGO ARCHITECTURE

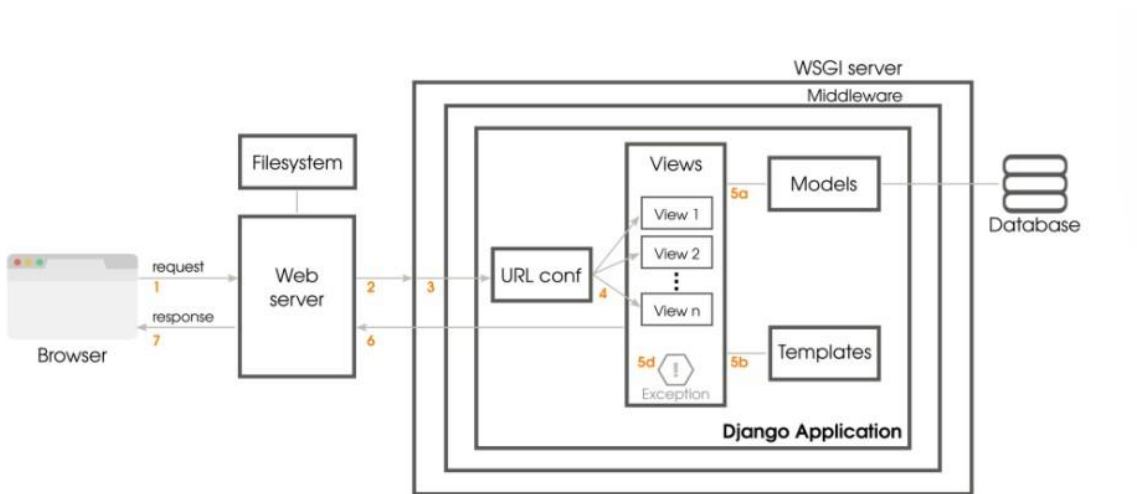

Django is based on the MVT Architecture: Model, View and Template. It is a software design pattern for developing a web application. It has the following three parts:

- Model: It acts as the data access layer which handles the data and the database. It is responsible for maintaining data. It is the logical data structure behind the entire application and is represented by a database (MySQL, Postgres, etc.).
- View: It is the user interface. It interacts with the model and renders a template. It is used to display our template using HTML, CSS and JavaScript files.
- Template: It acts as the presentation layer which handles the UI completely. It consists of the static parts of the desired HTML output as well as some special syntax describing how dynamic content will be inserted.

#### 4.3.1.2. OVERALL ARCHITECTURE

In Django, every view is associated with a URL. So, when the user clicks anything, Django first checks whether the URL exists or not. Then, it displays the View associated with that URL. Each view has association with a Model and a Template. Whatever is present in the template, is displayed using the view, and any data is pulled from the database using the Model.

### **4.3.2. TECHNOLOGY USED**

#### ***4.3.2.1. FRONTEND***

Front-end web development is the development of the graphical user interface of a website, through the use of HTML, CSS, and JavaScript, so that users can view and interact with that website.

- **HTML**

The Hyper Text Markup Language, or HTML is the standard markup language for documents designed to be displayed in a web browser. It uses different tags in the language to format web pages.

- **CSS**

Cascading Style Sheets (CSS) is a style sheet language used for describing the presentation of a document written in a markup language such as HTML. It adds style – fonts, colors, spacing, etc. – to Web documents.

- **JAVASCRIPT**

JavaScript often abbreviated JS, is a programming language that is one of the core technologies of the World Wide Web, alongside HTML and CSS. It is a lightweight, interpreted or just-in-time compiled programming language with first-class functions.

- **BOOTSTRAP**

Bootstrap is the most popular HTML, CSS, and JavaScript framework for developing responsive, mobile-first websites. It is an opensource toolkit used for quickly designing custom, responsive and powerful websites.

#### **4.3.2.2. BACKEND**

- **DJANGO**

Django is a high-level Python web framework that encourages rapid development and clean, pragmatic design. It takes care of much of the hassle of web development, so you can comfortably code your app. Some other advantages of Django are: it's heavy security, high scalability and increasing versatility.

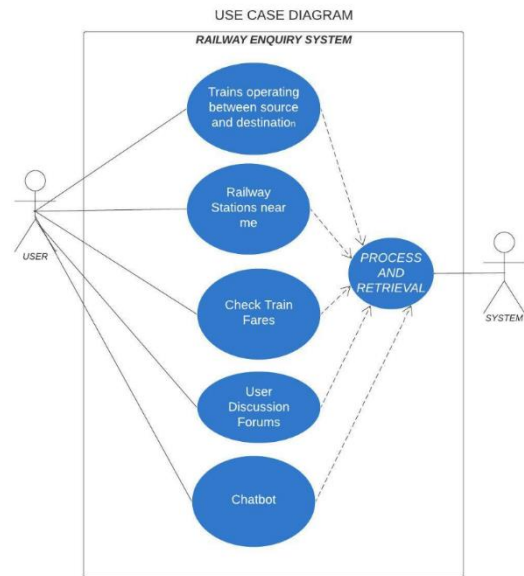

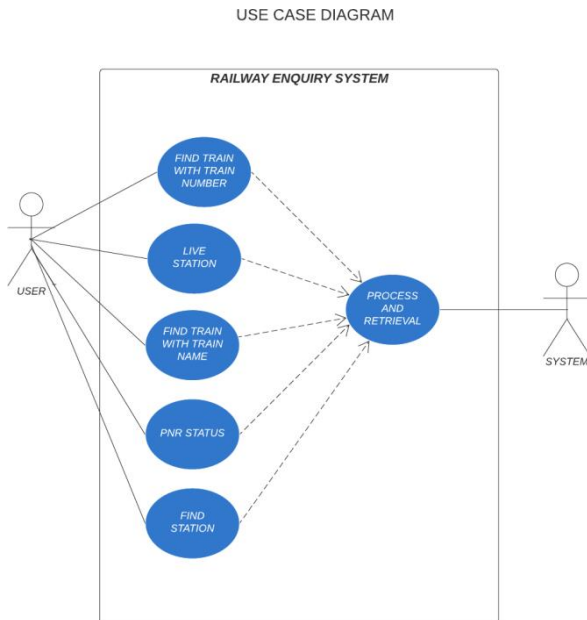

It uses Python as its major backend language and provides the SQLite database by default.

- **PYTHON**

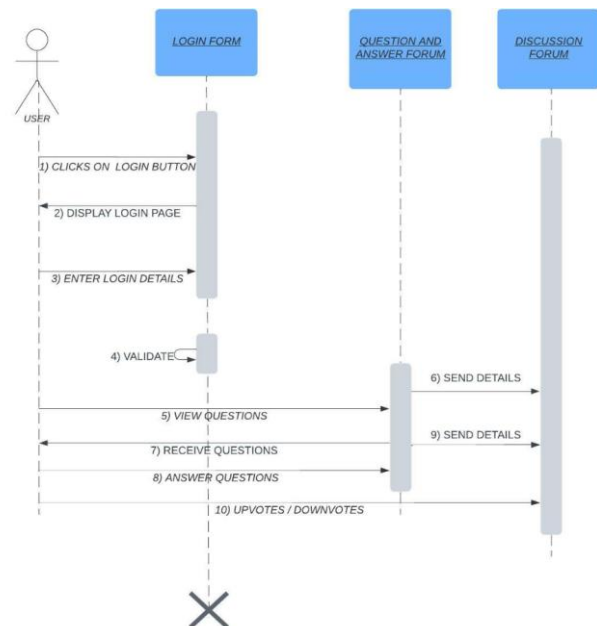

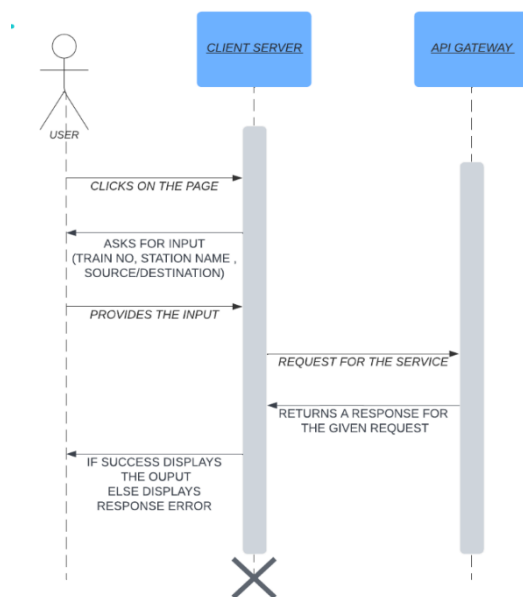

*Python is an interpreted high-level general-purpose programming language. Its design philosophy emphasizes code readability with its use of significant indentation. Its language constructs as well as its object-oriented approach aim to help programmers write clear, logical code for small and large-scale projects*

## 4.4. DESIGN

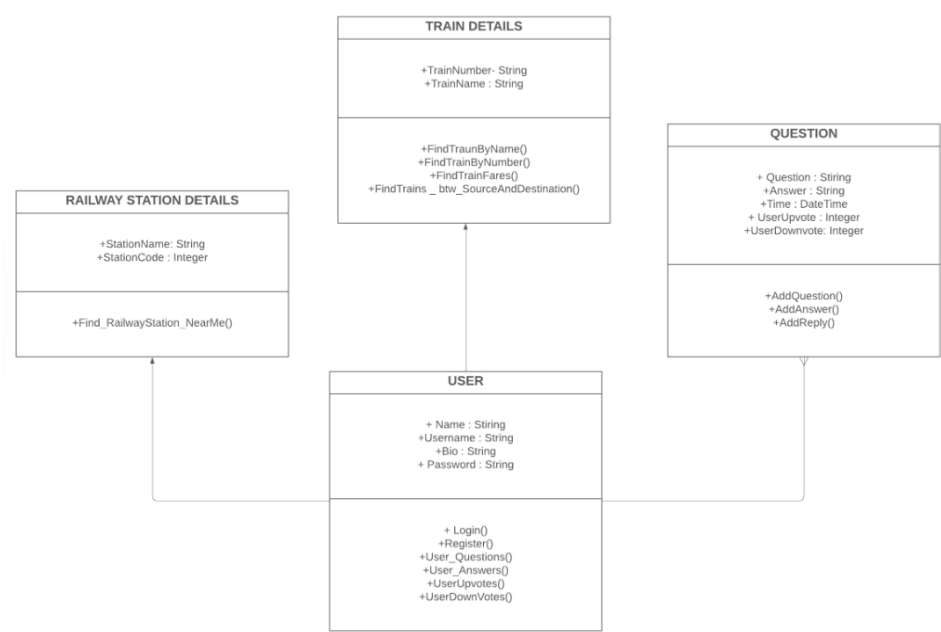

### 4.4.1. USE CASE DIAGRAM

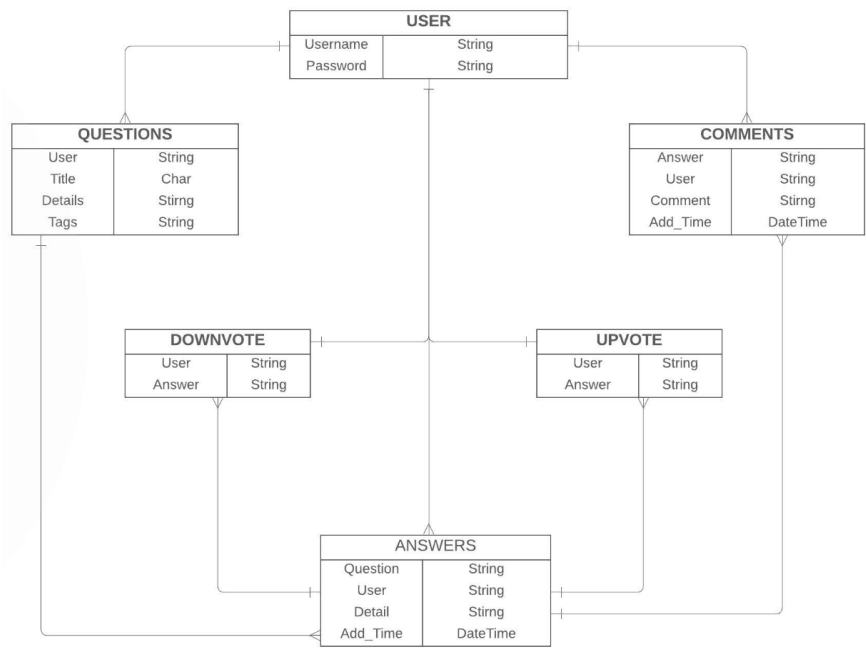

### 4.4.2. SEQUENCE DIAGRAMS

4.4.3. CLASS DIAGRAM

4.4.4. DB SCHEMA

## **4.5. IMPLEMENTATION**

### **4.5.1. FIND TRAIN WITH TRAIN NUMBER**

Firstly, the user is required to enter the train number in the search box. The user is given the option to get to know the train details such as

- 1) Train name
- 2) From (Place)
- 3) Destination (Place)
- 4) Arrival time and departure time
- 5) Availability of train on particular days of a week.

### **4.5.2. FIND TRAIN BY NAME**

Firstly, the user is required to enter the train name in the search box. The user is given the option to get to know the train details such as

- 1) Train name
- 2) From (Place)
- 3) Destination (Place)
- 4) Arrival time and departure time
- 5) Availability of train on particular days of a week

### **4.5.3. LIVE STATION**

Using this feature the user can get the details of the running train. The user is required to enter the train ID and date of journey.

The following status of the train gets displayed –

- 1) Train ID
- 2) Train Number
- 3) From (Place)
- 4) Destination (Place)
- 5) Departure status
- 6) Termination status
- 7) Date and time of departure
- 8) Alert message
- 9) Train is Late by (in minutes)

#### **4.5.4. PNR STATUS**

The user is required to enter the PNR number first. The details such as –

- 1) Train number
- 2) Train name
- 3) From (Place)
- 4) Destination (To)
- 5) Boarding date
- 6) Class
- 7) Chart status
- 8) Last Updated

#### **4.5.5. FIND STATION**

The user is required to enter the required station details. There will be a list of Trains displayed running through that station.

#### **4.5.6. FIND STATION**

The user is required to enter the required station details. There will be a list of trains displayed running through that station.

#### **4.5.7. FIND TRAINS BETWEEN SOURCE AND DESTINATION**

The user is required to enter the names of source and destination stations. There will be a list of trains displayed that are available between the required stations. Train departure, arrival time and the total journey time is displayed.

#### **4.5.8. FIND TRAIN FARES**

The user is required to enter the names of source and destination stations along with the train number. The categories like adult, general, tatkal, child, etc. are displayed along with their fares for different classes like 1A, 2A, 3A, SL, 2S, GN.

#### **4.5.9. RAILWAY STATIONS NEAR YOU**

The longitude and latitude of our region are automatically retrieved by the system based on the algorithm used. User needs to enter the radius (in km) within which he wishes to get the train details. All the train details within that radius are displayed.

#### **4.5.10. CHATBOT**

User can have a chat with the system in case of any queries such as Finding trains between two stations, fares, railway stations, PNR status and live station

## 4.6. GITHUB/FOLDER STRUCTURE

Based on the actual code and documentation files, we have segregated into two different folders – documentation and RailwayEnquirySystem.

 <b>santosh-29</b> Add files via upload	ac98fc1 now	 4 commits
 miniproject	Add files via upload	10 minutes ago
 README.md	Initial commit	14 minutes ago
 abstract.pdf	Add files via upload	now
 findMyTrain documentation.pdf	Add files via upload	3 minutes ago

## 4.7. TESTING

Testing refers to the approach in which a thorough investigation is conducted to provide stakeholders with information about the quality of the product or service under test. It allows us an objective, independent view of the software created.

In this project, we have done the basic testing. The testing techniques taken include:

- i. Execution of the program with the aim of finding errors
- ii. Testing functionality of each use case

## 4.8. DATASET STRUCTURE

## 5.6. FIND STATION

The screenshot shows a web browser window with the address bar displaying "127.0.0.1:8000/findstation". The page has a dark blue header with the "Find My Train" logo on the left and navigation links "Home", "PNR Status", "Find Train", and "Live Location" in the center. A "Contact" button is on the right. The main content area features a white box with the title "Find Station" and a placeholder text "Lorem ipsum dolor sit amet consectetur adipiscing elit. Quam, perferendis." Below this is a form with a label "Station Code" and a text input field containing "chennai". A "Search" button is positioned below the input field.

Find Station

Lorem ipsum dolor sit amet consectetur adipiscing elit. Quam, perferendis.

Station Code

chennai

Search

The screenshot shows the same web browser window, but the address bar now displays "127.0.0.1:8000/findstationresult". The page layout is identical to the previous screenshot, but the main content area displays a search result table. The table has three columns: "Serial Number", "Station Name", and "Station Code". It contains seven rows of data for stations in Chennai.

Station Name

Enter Station Name

Search

Serial Number	Station Name	Station Code
1	CHENNAI PARK TOWN	MPKT
2	CHENNAI CHETPAT	MSC
3	CHENNAI BEACH JN	MSB
4	CHENNAI PARK	MPK
5	CHENNAI FORT	MSF
6	CHENNAI EGMORE	MS
7	CHENNAI CENTRAL	MAS

## 5.7. FIND TRAINS BETWEEN SOURCE AND DESTINATION

The screenshot shows a web browser window with the URL `127.0.0.1:8000/findtrainsrcdest/`. The page has a dark blue header with the "Find My Train" logo and navigation links: Home, PNR Status, Find Train, Live Location, and a "Queries" button. The main content area is titled "Find train between source and destination" and includes a subtext: "Get the details of Indian Railway trains between source and destination stations". Below this, there are two input fields: "Source" with the value "KCG" and "Destination" with the value "TPTY". A "Search" button is positioned below the input fields.

The screenshot shows the same web browser window, but now displaying the search results. The header and navigation links remain the same. The main content area is titled "Trains Between Stations". Below this, there are two search input fields: "Source" with the placeholder "Enter Source Station" and "Destination" with the placeholder "Enter Destination Station", followed by a "Search" button. The results are displayed in two separate boxes. The first box shows the train "07509 - HYB TPTY SPL" with the route "Hyderabad Decan to Tirupati", a departure time of "17:32", an arrival time of "05:30", and a journey time of "11.58 hrs". The second box shows the train "12708 - NZM TPTY SF EXP" with the route "Hazrat Nizamuddin to Tirupati", a departure time of "09:10", an arrival time of "20:50", and a journey time of "11.40 hrs".

Trains Between Stations			
<b>07509 - HYB TPTY SPL</b>			
Hyderabad Decan to Tirupati	Departure : 17:32	Arrival : 05:30	Journey Time : 11.58 hrs
<b>12708 - NZM TPTY SF EXP</b>			
Hazrat Nizamuddin to Tirupati	Departure : 09:10	Arrival : 20:50	Journey Time : 11.40 hrs

## 5.11. CHATBOT

## **6. DISCUSSION AND FUTURE WORK**

In this project, we have addressed the various railway enquiry features such as finding train by number, finding train by name, PNR status, live station, search station

We have developed an online webapp to include all these features mentioned above. This has been done by using Django framework because of its rapid development and scalability.

In future, we would like to incorporate more features like-Train tickets booking, probability of confirmation booking the tickets using ML, uploading railway blogs.

Also, this web application can be created into a mobile application using the Flutter framework and Firebase as the database.
